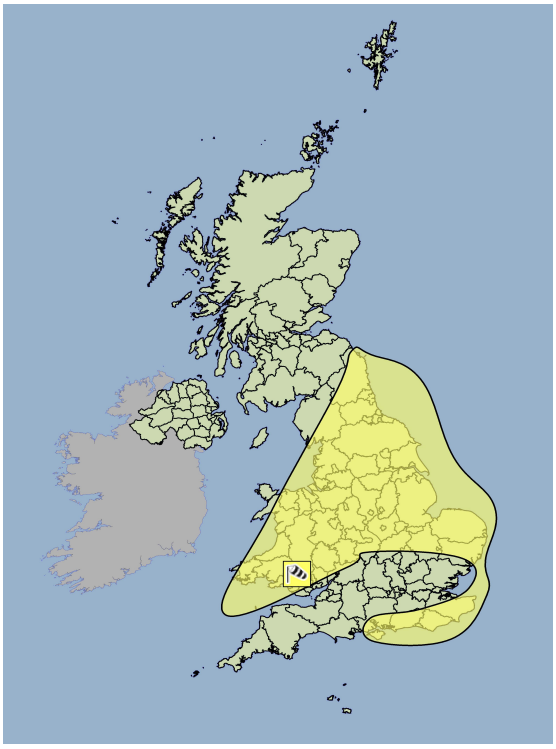
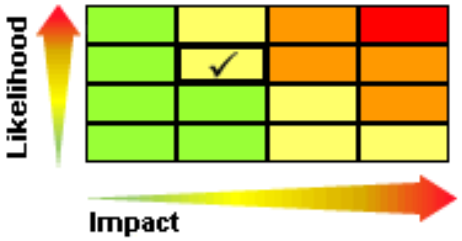
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep depression for this time of year which is currently moving northeastwards away from Scotland. Strong winds and gusty conditions left behind in its wake are becoming increasingly confined to Wales, northern and central England and the far south and southeast of England. Today's strong gusts are expected to ease and die down this evening.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **11:15 on Tue, 02nd Jun 2015** until **18:00 on Tue, 02nd Jun 2015**

Strong to gale force winds with gusts of 40 to 50 mph will continue to affect many parts England and Wales through the rest of today. Gusts could reach 55 mph in a few exposed sites. Given the unseasonable nature of the winds, the public should be aware of the potential for localised disruption to transport and outdoor activities and damage to some trees remains possible.

This is further update to the warning, first issued on Sunday and updated earlier today, to remove areas where the greatest threat of impacts has passed, although these areas will still remain windy for the rest of today.
